

## RIB iTWO site: All in view, All connected, Everything works.

With iTWO site you always keep control of your construction site and connect to the workflow wherever you are.

View plans, documents and correspondence, research addresses, prepare protocols and record defects:

All participants have all project data available at any location. Whether internal or external - everyone works with the same level of knowledge and thus saves time, prevents coordination loops and agreement errors. The result is a complete and always up-to-date project documentation that keeps you on the safe side even in the case of a legal dispute.

## Unique: Company-wide. Multi Tool. Part of iTWO 4.0. BIM 5D.

iTWO site is not an stand-alone solution like many construction site APPs. It is part of the iTWO project enterprise platform. This means that approx. 70-80% of the data used on the mobile device is already available in the system and need not be re-entered again.

iTWO site offers a comprehensive multi-project view for ongoing and completed construction sites in one tool. Thus, KPIs for project controlling are available in unique quality.

iTWO site is a unique multi-partner portal for all parties involved ( joint venture partners, subcontractors, owner). It enables a cross-company organization of all documents, processes and information.

### Simply share Information

With RIB iTWO site, you can set up documents, plans and processes individually for project sections, subprojects, trades, etc., based on the task. In this way, employees and project partners work with the correct level of knowledge and save coordination loops and consultation effort.

This creates a win-win situation that also makes you an attractive business partner. - With iTWO site, much of the information from the iTWO platform is also available on mobile devices. This replaces many isolated or special solutions that are commonly found in companies.

Collaborative work on the construction site

Transparent tasks and agreements

Mobile process management

Transparent construction site documentation

All key figures at a glance

Highest performance and data security

### » Solid evaluation by the site manager

You can check your gut feeling in iTWO site by entering project key figures in all areas but also in detail for analysis.. You have everything important about the construction project at your fingertips, even when you are traveling.

### » Keep control easily

You can compare construction sites company-wide because all site events are recorded and documented according to the same schema. If, for example, a delay is recorded that could cause EUR 80,000 in additional costs, this immediately triggers an escalation to the senior site manager. In this way, it becomes clear very quickly whether all tasks are really on schedule.

### » Transparent agreements and safe processes

iTWO site makes many things easier because it supports business processes that are experienced on a daily basis: Approvals, escalations, evaluation schemes. No matter whether internal, subcontractor or project partner - everyone knows the facts.. Knowledge builds up automatically and will not get lost so quickly when an employee is on vacation or changes jobs.

### » Get started immediately

A large part of the data (e.g. costing, accounting, business partners, resource planning) is already available in iTWO 4.0 and can therefore be used directly in iTWO site. The construction team on site therefore only has to add the new and daily updated changes. This saves a lot of effort and ensures user acceptance.

### » Faster accurate information

The site managers evaluate the construction sites every Friday evening and the managing director still has an overview over the weekend. iTWO site makes data and processes immediately available to all stakeholders, defect reports from the construction site are communicated seconds later to the assigned project partner who can fix them on the same day. This way, you can significantly reduce requests and callbacks.

### » Easier to keep good subcontractors

iTWO site is as popular with site managers as it is with subcontractors. With the intuitive iTWO site app, the subcontractor site manager can have a transparent overview of his area of responsibility. Annoying phone calls, coordination via e-mail floods and paperwork are a thing of the past. iTWOSite already enables the use of a common database (CDE).

### » iTWO site pays off immediately

Because iTWO site is a component of the iTWO enterprise solution, where there is no need of many of the usual tools and stand-alone solutions (mobile capture, organization, communication, database, etc.) iTWO offers almost everything you need for project and on site processing. The bottom line is that we permanently save costs for software maintenance, interface programming and training.

### » Less time wasted, better motivation

iTWO site helps all stakeholders enormously to save time for searching, communicating, logging and documenting. Overtime is reduced. Standard tasks are easily delegated and the site manager focuses on the important topics such as customer meetings, technical planning or controlling.
